[Reuters Institute – AI and News Forecasts 2026](#)

- **AI chatbots for news:** Weekly use of AI chatbots for news increased from 7% to 10% globally, and is higher among people under 35 (16%). Follow-up questions are one of the features users value.
- **Video and social news:** Social/video networks (54%) have overtaken news websites/apps (51%) as a way of accessing online news across Reuters' surveyed markets. 77% consume online news video weekly.
- **More video and audio investment:** 79% of surveyed news leaders consider increased video investment important and 71% say the same for audio.
- **More personalization:** AI is enabling personalization beyond selecting articles, including adapting format, tone, style and depth.
- **Agentic AI:** 75% of surveyed news executives expect agentic AI to have a large or very large impact on the news industry in the near future.
- **Trust and provenance:** News organisations are paying more attention to AI transparency, content origin, watermarking and standards such as C2PA as synthetic content grows.

(C2PA stands for the Coalition for Content Provenance and Authenticity. It is an open technical standards project that helps verify the origin, history, and edit details of digital media like photos, videos, and audio. <https://c2pa.org/>)

EXISTING SOLUTIONS

- **Omroep Brabant – AI Nina (2024):** AI-generated version of presenter Nina van den Broek using her appearance and voice to present journalist-created news videos. This was documented as an experiment; continued regular use in 2026 is not confirmed. (<https://www.omroepbrabant.nl/nieuws/4466686/omroep-brabant-start-experiment-met-ai-presentator>) (<https://www.tiktok.com/@omroepbrabant/video/7366265559001861408>)

- **TalkRadio (2026):** Dutch online news service using AI converts text feeds from the Algemeen Nederlands Persbureau (ANP) and weather from the KNMI into automated audio streams using synthetic voice software. Verified via Broadcast Magazine's TalkRadio Launch Coverage and available as an automated daily news capsule on Podcast Luisteren – TalkRadio.
(<https://www.broadcastmagazine.nl/televisie-audio/audio/24-7-online-nieuwszender-talkradio-gelanceerd/>)
- **SB Intelligence (2026):** Conversational AI based on around 25,000 Spreekbuis articles, supporting natural-language questions, follow-ups, sources and speech functionality. (<https://www.spreekbuis.nl/spreekbuis-lanceert-sb-intelligence/>)

EXPECTATION

Based on Reuters Institute's 2026 industry research and forecasts:

- **News access:** traditional search/articles → more AI-mediated and conversational access.
- **Personalization:** article recommendations → personalization of format, tone, style and depth.
- **Presentation:** more investment in video, audio and synthetic presenters.
- **Automation:** increasing use of agentic AI across journalism workflows.
- **Trust:** increasing importance of source transparency, provenance and verification.
